

SONITRON

SPECIALIST CARPET CLEANING CHEMICALS SINCE 1981

DEODORANTS

PRODUCT DESCRIPTION

Sonitron Deodorants are not just a simple perfume compound but exerts a 3 way action. They contain odourless odour destroyers which are effective alone in deodorising, supported by a powerful quaternary germicide, and a reodorant (perfume blend with a carefully regulated residual action). Since the product may be used in domestic as well as commercial applications, the residual odour has been designed to last long enough to indicate that the cleaners have been in attendance, but not long enough to irritate people who do not like a persistent perfume in a domestic or office environment.

SONITRON DEODORANT RANGE

SONIFRESH: A fresh cologne type, compatible with most Sonitron detergents. Sonifresh is our most popular perfumed reodorant.

FRESH CITRUS: Fresh lemon notes predominate in this attractive citrus blend. This product is totally compatible with our citrus special detergents. Citrus is a very good choice used adjacent to a kitchen or food area, since it is a natural food type odour.

ODORBLOK: This pleasant but very persistent product is a top seller and widely used with carpet cleaning in rental accommodation where the premises may be closed up shortly after completion of the clean. The same problem may occur in car detailing.

BABY POWDER: The odour is similar to the well known Johnson's Baby Powder. It has found a particular niche market in areas such as ladies amenities. It is quite residual

SK85: Designed as an odour neutraliser, it removes unwanted odours but leaves very little residual odour itself.

APPLICATIONS

Sonitron Deodorants are especially designed to support and enhance the action of Sonitron cleaning compounds and are widely used in carpet and upholstery cleaning and flood restoration operations.

They are very suitable for use as a room deodorant in, motels, hotels and for use in the toilet and amenities areas of hotels, caravan parks, clubs and commercial premises generally. Sonitron Deodorants are equally suitable for use in motor vehicles and in the home.

DIRECTIONS FOR USE

For Use On Carpets:

Sonitron Deodorants may be used as an “in tank” additive or sprayed directly onto the carpet after cleaning. If used in the extraction tank rates generally are in the range of 100 to 300ml per 20 litres of extraction liquid.

If the area is heavily contaminated, the affected area may be injected below the surface of the carpet with a large hypodermic needle. In extremely bad cases it may be necessary to lift the carpet, and remove the contaminated section of underlay. If this is done, swab the floor with the deodorant and replace with new underlay and spray both sides of the carpet before relaying.

The quantity of deodorant applied may be controlled by limiting the amount of concentrate sprayed or by diluting the product first in water.

A ratio of 1 part of Deodorant in 10 parts of water is suggested.

This is equivalent to:

or 1 litre plus 9 litres of water
 500mls plus 4.5 litres of water

Dilution at this ratio ensures that the quaternary germicide, the bactericidal portion of the deodorant is still present at an effective concentration.

For General Deodorant Use

Sonitron Deodorants may be wiped onto surfaces such as toilet seats, bowl exteriors or cisterns of toilets, ceramic tiles in shower recesses, around light switches and similar hand surfaces to give a lasting residual odour. When used undiluted to wipe items such as toilet seats, Sonitron Deodorants have a powerful bactericidal and cleaning action as well. A light spray into the atmosphere may be all that is necessary when used as a general room deodorant. The method can be varied to suit the residual action and perfume concentration required.

SAFETY NOTES

Sonitron Deodorants contains about 20% alcohol. This is not enough for it to support combustion but it may have a drying effect on the skin and if ingested by young children could cause severe intoxication. The usual storage precautions for chemicals are therefore essential. SDS sheets are available for all products.
